

The embodiments of the invention for which an exclusive privilege and property right are claimed are defined as follows:

1. An animal wound wrap adapted for receipt around an abdomen and on another location on an animal's body, the wound wrap comprising:

an abdomen wrap portion adapted for receipt around the animal's abdomen and having a first end portion with a first fastener means, said first fastener means for releasably engaging a second end portion of said abdomen wrap portion; and

an extension wrap portion having a first end portion attached to a side of said abdomen wrap portion and at an angle thereto, said extension wrap portion having a second end portion with a second fastener means, said second end portion adapted for receipt on another location of the animal's body, said second fastener means for releasably securing said second end portion thereon.

2. The wound wrap as described in claim 1 wherein said abdomen wrap portion and said extension wrap portion are made of a stretchable loop-like loose weave material.

3. The wound wrap as described in claim 2 wherein said first and second fastener means releasably engage the stretchable loop-like loose weave material of said abdomen and extension wrap portions.

4. The wound wrap as described in claim 3 wherein said first and second fastener means are hook fasteners.

5. The wound wrap as described in claim 1 wherein said extension wrap portion is attached to the side of said abdomen wrap portion at right angles thereto.

6. The wound wrap as described in claim 1 wherein said second end portion of said wrap extension portion is a U-shaped second end portion having a first strap and a second strap, said first and second strap having said second fastener means thereon.

7. The wound wrap as described in claim 1 further including at least one primary wound dressing having hook fasteners thereon for releasably engaging the loop-like loose weave material on said abdomen wrap portion and on said extension wrap portion.

8. The wound wrap as described in claim 1 further including a plurality of primary wound dressings having hook fasteners thereon for releasably engaging the loop-like loose weave material on said abdomen wrap portion and on said extension wrap portion.

9. The wound wrap as described in claim 1 further including a tube holding strap having hook fasteners thereon for releasably engaging the loop-like loose weave material on said abdomen wrap portion and on said extension wrap portion, said tube holding strap adapted for holding an IV tube or drain tube thereon.

10. An animal wound wrap adapted for receipt around an abdomen and on another location on an animal's body, the wound wrap comprising:

an abdomen wrap portion made of stretchable loop-like loose weave material adapted for receipt around the animal's abdomen and having a first end portion with first hook fasteners thereon, said first hook fasteners for releasably engaging the loop-like loose weave material of a second end portion of said abdomen wrap portion; and

an extension wrap portion made of stretchable loop-like loose weave material having a first end portion attached to a side of said abdomen wrap portion and at an angle thereto, said extension wrap portion having a second end portion with second hook fasteners, said second end portion adapted for receipt on another location of the animal's body, said second hook fasteners for releasably engaging the loop-like loose weave material on said second end portion.

11. The wound wrap as described in claim 10 wherein said extension wrap portion is attached to the side of said abdomen wrap portion at right angles thereto.

12. The wound wrap as described in claim 10 wherein said second end portion of said wrap extension portion is a U-shaped second end portion, said U-shaped second end portion having a first strap and a second strap, said first and second strap having said second hook fasteners thereon.

13. The wound wrap as described in claim 10 further including at least one primary wound dressing having hook fasteners thereon for releasably engaging the loop-like loose weave material on said abdomen wrap portion and on said extension wrap portion.

14. The wound wrap as described in claim 10 further including a plurality of primary wound dressings having hook fasteners thereon for releasably engaging the loop-like loose weave material on said abdomen wrap portion and on said extension wrap portion.

15. The wound wrap as described in claim 10 further including a tube holding strap having hook fasteners thereon for releasably engaging the loop-like loose weave material on said abdomen wrap portion and on said extension wrap portion, said tube holding strap adapted for holding an IV tube or drain tube thereon.

16. An animal wound wrap adapted for receipt around an abdomen and on another location on an animal's body, the wound wrap comprising:

an abdomen wrap portion made of stretchable loop-like loose weave material adapted for receipt around the animal's abdomen and having a first end portion with first hook fasteners thereon, said first hook fasteners for releasably engaging the loop-like loose weave material of a second end portion of said abdomen wrap portion, said abdomen wrap portion stretchable in opposite directions along a first axis, said first axis disposed along a length of said abdomen wrap portion;

an extension wrap portion made of stretchable loop-like loose weave material having a first end portion attached to a side of said abdomen wrap portion and at an angle thereto, said extension wrap portion having a U-shaped second end portion with second hook fasteners, said U-shaped second end portion adapted for receipt on another location of the animal's body, said second hook fasteners for releasably engaging the loop-like

loose weave material on said second end portion, said extension wrap portion stretchable in opposite directions along a second axis, said second axis disposed along a length of said extension wrap portion.

17. The wound wrap as described in claim 16 wherein said second axis of said extension wrap portion is disposed at a right angle to said first axis of said abdomen wrap portion.

18. The wound wrap as described in claim 16 further including at least one primary wound dressing having hook fasteners thereon for releasably engaging the loop-like loose weave material on said abdomen wrap portion and on said extension wrap portion.

19. The wound wrap as described in claim 16 further including a plurality of primary wound dressings having hook fasteners thereon for releasably engaging the loop-like loose weave material on said abdomen wrap portion and on said extension wrap portion.

20. The wound wrap as described in claim 16 further including a tube holding strap having hook fasteners thereon for releasably engaging the loop-like loose weave material on said abdomen wrap portion and on said extension wrap portion, said tube holding strap adapted for holding an IV tube or drain tube thereon.
